

HOW MASV CAN REDUCE YOUR OPERATING COSTS

M A S V

Drastically cut your I.T. expenses, save on resourcing hours, protect against costly data breaches, and increase output with MASV.

With MASV you will pay noticeably less per GB than [Aspera](#), [Signiant](#), or [GoAnywhere](#).

You will also save a ton of time, money, and energy thanks to our swift onboarding and refreshing ease-of-use. You will never have to contact us to add users, purchase your own infrastructure, or recruit an I.T. team to deal with ports and firewalls.

Whether you use our browser interface or Desktop app, we make it easy to start collaborating with large files in minutes so your team can get started without any support.

Next page: 8 ways MASV can reduce your operating costs.

Stick To A Lower Rate For Longer

We will lock-in a custom rate on a multi-year agreement so you can send hundreds of terabytes without renegotiating every year.

Scale Without Surprises

Most solutions charge per seat. We don't. We only charge upon usage. Invite unlimited users and don't get hit with surprise fees when onboarding new collaborators.

Cut I.T. Costs

Faster, more stable transfers mean less I.T. troubleshooting and remediation. Our browser-based interface eliminates complex and expensive software or plugin installations.

We also offer an easy-to-use [Desktop app](#) should you need it. It's optional (and totally free).

Grow Without Incurring Extra Costs

Having a busy period? We automatically scale to match increased demand at no extra cost. Upgrading to a bigger facility? We will support your increased network speed up to [10Gbps](#) per client.

Get best-in-class, scalable performance out-of-the-box, regardless of your plan or company size.

M A S V

Avoid Costly Breaches

The cost of a data breach is significant. We manage our own infrastructure so things get resolved quickly – instead of you spending days patching a [self-hosted system](#).

Our [security posture](#) includes TPN, ISO, and SOC2 compliance, premium security features, file encryption, and SSO authentication with SAML.

Save on Expensive Network Infrastructure

Do you need to upgrade your network bandwidth because your file transfers are too slow? Think again. Your current provider might be [throttling your performance](#).

We [accelerate files](#) using nearly 90% of your bandwidth to give you the most bang for your buck, with tools in place to control how much bandwidth you want to use and when.

Onboard Users Quickly

Get new staff onboarded in minutes thanks to our dead-simple UI. We also make it easy for external teams to use MASV without a login. That means less time to full productivity, better outputs, and more cost-savings.

Share More Efficiently

Spend fewer staff hours and achieve faster turnaround times thanks to stable transfers, one-click [cloud integrations](#), and no-code [automations](#) that save overhead.

Better File Transfer at a Fraction of the Cost

If you need to move large amounts of data daily and you don't have an endless supply of resources, MASV can transform your business with:

- Powerful transfers to free up your team for other tasks.
- Easy onboarding which saves on training and I.T. costs.
- High-level security infrastructure to protect your data from costly remediation.
- Locked-in multi-year pricing to eliminate annual renegotiations.

If you haven't already, [contact us](#) to learn how we can support your large data requirements.

Need to do some more research first? No problem. You can test MASV for free by [signing-up here](#).
